Spain (Hybrid / Remote)

To the attention of the **Hiring & Technical Security Assessment Team**
Advens Iberia

October 2026

> **Subject: Application for Vulnerability & Network Security Analyst (Advanced & Manual Methodologies)**

Dear Advens Hiring and Technical Team,

I am writing to express my strong interest in the **Vulnerability Analyst** position at Advens. Having closely followed Advens' leadership in European cybersecurity and its distinct culture combining technical excellence with societal impact, I strongly resonate with your mission. The focus of this vacancy —particularly the need to move beyond automated scanning suites through **rigorous manual validation, advanced techniques, and deep network fundamentals**— matches my day-to-day focus and capabilities.

Vulnerability management is frequently reduced to executing generic scanners and forwarding automated exports. My operational approach is the opposite: **descending to protocol, code, and raw packet levels to prove real exploitability, contextualize complex attack vectors, and rigorously eliminate false positives**.

Key technical contributions and projects that directly substantiate my profile include:

- **Low-Level Network & Protocol Analysis:** Through continuous firmware development in C/C++ on `ESP32Marauder`, I actively engage with 802.11 frame manipulation and injection, raw packet sniffing, hardware/RF interface inspection, and serial bus communications. I possess an intimate understanding of how traffic traverses, transforms, and interacts with network stacks and intermediate devices.
- **Advanced & Manual Assessment Methodologies:** In custom developments such as `MCP_Pentesting` (a Model Context Protocol server built to orchestrate, normalize, and audit offensive/defensive tooling in a structured workflow) and research on covert side-channels (`Mouseophone`), I apply creative, manual testing procedures to detect vulnerabilities that standard automated suites routinely overlook.
- **Scripting, Rapid Triage & Actionable Reporting:** Highly proficient in Python, C/C++, PowerShell, and Unix shells to build triage automations, parsers, and custom Proof-of-Concepts (PoCs). My priority is always translating intricate technical findings into pragmatic, risk-prioritized remediation roadmaps for stakeholders.

I bring a dedicated analytical mindset, autonomy in problem-solving, proven ability to thrive in collaborative multidisciplinary environments, and complete technical fluency in both Spanish and English.

Thank you very much for your time and consideration. I would welcome the opportunity to discuss with your team how my skills and active projects can deliver immediate value to Advens.

Santiago Javier
